

For the past 40 years, neurofeedback has been studied in research labs at prominent universities throughout the world. There are numerous published medical studies available at: [www.BraincoreoftheLowcountry.com](http://www.BraincoreoftheLowcountry.com) & [www.BraincoreofGreaterBoston.com](http://www.BraincoreofGreaterBoston.com)

Neurofeedback is considered by the Food and Drug Administration to be safe. In fact, the FDA recognizes that neurofeedback has never produced a serious side effect since it was first discovered over 40 years ago.

"Level 1 - Best Support for Attention-Hyperactivity", according to the American Academy of Pediatrics.

"Neurofeedback should play a major therapeutic role in many difficult areas. If any medication had demonstrated such a wide spectrum of efficiency it would be universally accepted and widely used".

~ Dr. Frank H. Duffy,  
Professor and Pediatric Neurologist at  
Harvard Medical School

## ⚙️ TRAIN YOUR BRAIN

- PAINLESS
- DRUGLESS
- NON-INVASIVE
- PERMANENT CHANGE
- NO HARMFUL SIDE EFFECTS

South Carolina:  
- Bluffton  
- Hilton Head  
- Mount Pleasant  
- Murrells Inlet

Greater Boston,  
Mass.:  
- Foxboro  
- Jamaica Plain

# BrainCore Neurofeedback

## Train your brain

BrainCore Neurofeedback is used to retrain disordered brainwave patterns common in many conditions such as:

- ADD/ADHD
- Anxiety
- Autism/Asperger's
- Learning Disorders
- Depression & Mood Disorders
- Post Stroke/Traumatic Brain Injury
- Migraine & Tension Headaches
- Fibromyalgia & Chronic Pain
- Insomnia & Sleep Issues
- Memory Loss & Dementia
- Post Traumatic Stress Disorder (PTSD)
- Peak Performance
- and more...

### Brain Wave Patterns

Over 40 years of scientific

research has demonstrated that, for any given circumstance, there is an accepted normal pattern of brainwave activity. A healthy, balanced, and properly regulated nervous system will produce the appropriate brain waves, at the appropriate levels, and at the appropriate times for any given situation.

The nervous system becomes tense and unbalanced as a result of poor nutrition, stress, food sensitivities, drugs, and trauma. Often brainwave patterns become disordered, resulting in many common symptoms and conditions.

### BrainCore Neurofeedback

The goal of all neurofeedback is to transform unhealthy brainwave imbalances into normal, healthy, and organized patterns. By doing this the brain becomes more stable and is able to operate optimally and efficiently, often relieving unwanted symptoms.

### The Process

Qualified candidates are scheduled for a QEEG which records and analyzes brainwave activity. Individuals who are accepted into our program are hooked up to a computer with sensors. The technology displays their live brainwaves. According to scientifically based protocols, the computer detects proper patterns and will visually and audibly "reward" the brain. The brain learns how and when to produce certain brainwaves, and new neural pathways are created through this guided exercise. Science shows that these changes are permanent.
